

WORKSHEET

MEASUREMENTS FOR CUSTOM MOTORHOME WINDSHIELD DRAPES

DRIVER-SIDE track length: _____

CENTER track length (only if you will be ordering 3 panels): + _____

PASSENGER-SIDE track length (0" if you want only 1 panel): + _____

*TOTAL Track Length (Driver + Center + Passenger) = _____ ***

DRAPE LENGTH: _____

*** The TOTAL Track Length is what will
determine the price of your drapes.*

When measuring for RV windshield drapes, measure each track from side to side, following curves as best you can, for the width, and from the top of the track down to where the curtain should fall for drape length. We always add an extra 6" to the width of each panel to allow for fullness, so you can be sure your custom RV windshield drapes will hang nicely and fully cover your windshield. We do not need any measurements from old drapes.
